

Concerns Over Dust Mite Allergens End with New Pillow Fabric Design

EPI - Thanks to the ingenuity and persistence of ELN Living Ltd., the tiny particles that dust mites generate in your pillows need no longer cause sleepless nights.

Recent tests have certified that ELN Living pillow fabric is an effective barrier against dust mite allergen transfer. This barrier even includes allergen transfer along pillow seams.

What's more, ELN Living stops dust mite allergens in their tracks without using chemical sprays or other fabric treatments.

The secret, according to unnamed sources, is ELN's revolutionary all-cotton, all-natural fabric. Not only does this incredible fabric prevent dust mite allergen transfer. It does so while delivering the refreshing air circulation consumers expect from the best cotton.

Finally, breathability, dust mite allergen prevention, and peace-of-mind—together in the same product and free to anyone who chooses an ELN pillow. It seems that now we can all rest easier.

With ELN, there's simply no more need to worry about dust mite allergens, to lose any sleep thinking about dust mites, or to compromise health and well-being.
